KHC Program Notice 04-2024

1. Subject: Ground Cover

Guidance: KHC clarified ground cover guidance in the Program Manual revision, dated October 1, 2024. Ground cover is a health and safety measure since it is protecting a home from moisture and radon exposure. Ground cover should be installed on all homes, regardless of 100% ground coverage. Subgrantees should install ground covers in all areas that are accessible, which would not include basements with slab floors. (Accessible is defined as any area that can be accessed safely.) If subgrantees have a concern about the installation of ground covers in a project, they should contact their technical monitor.
